Art Unit: 1764

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-12, 16 and 17, drawn to a honeycomb structure and an exhaust gas purification system comprising said honeycomb structure, classified in class 422, subclass 168+.

II. Claims 13-15, drawn to a method for manufacturing a honeycomb structure, classified in class 502, subclass 439.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the honeycomb product as claimed can be made by another and materially different process, such as a process comprising the step of using a mechanical means (e.g., a knife, blade or drill) to form at least one slit in an extruded honeycomb structure.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, their different fields of search (see MPEP § 808.02), and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

2. If Applicants elect Group II, restriction to one of the following inventions is required under 35 U.S.C. 121:

Art Unit: 1764

IIA. Claims 13 and 14, drawn to a method for manufacturing a honeycomb structure by jetting a fluid onto a honeycomb structure, classified in class 502, subclass 439, and class 264, subclass 504.

IIB. Claim 15, drawn to a method for manufacturing a honeycomb structure by irradiating a honeycomb structure with a laser beam, classified in class 502, subclass 439, and class 264, subclass 482.

The inventions are distinct, each from the other because of the following reasons:

Inventions IIA and IIB are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions are not connected in design, operation, or effect and therefore the facts relied on for this conclusion are in essence the reasons for insisting upon restriction.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, their different fields of search (see MPEP § 808.02), and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated

Page 4

as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103 (a) of the other invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer A. Leung whose telephone number is (571) 272-1449. The examiner can normally be reached on 9:30 am - 5:30 pm Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn A. Caldarola can be reached on (571) 272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
